PROFESSIONAL SUMMARY

Computer Science Engineering graduate with experience developing full-stack healthcare applications, backend services, data pipelines, REST APIs, relational database architectures, analytics dashboards, responsive Flutter interfaces and AI/RAG Systems. Built a Pharmacy Management System using Flutter, PHP Slim, and developed a LangChain-based RAG platform for healthcare document retrieval and LLM-assisted response generation. Experienced with Python, FastAPI, Celery, LangChain/LangGraph, PHP Slim, Flutter, JavaScript, MySQL, PostgreSQL, and Linux-based delivery workflows. Seeking backend, full-stack, or AI-focused software engineering roles.

TECHNICAL SKILLS

Languages	Python, PHP, JavaScript, Dart, C, HTML, CSS
Databases and Infra	MySQL, PostgreSQL, Redis, RabbitMQ, Qdrant, MinIO, Database Design
Backend & APIs	FastAPI, Celery, PHP Slim Framework, REST APIs, SQL, asynchronous processing, Data Mapping & Automation
Frontend	Flutter Web, vanilla JavaScript web interfaces
Tools and Platform	Linux, Git, CI/CD, Apache Superset, Flutter, Docker/Podman, Prometheus, Grafana
AI/ML	RAG Pipelines, Deep Learning, CNNs (YOLOv8), Model Evaluation (F1, Confusion Matrix), Explainable AI (Grad-CAM)

EXPERIENCE

SOFTWARE DEVELOPMENT INTERN — AYUSMART TECHNOLOGIES LLP (March 2025 – Present)

- Solely developed a full-stack **Pharmacy Management System** using Flutter Web, PHP Slim, and MySQL, delivering prescription intake, batch-level inventory, dispensing, billing, payment, and reporting workflows.
- Built **Ayusmart Insights**, designing normalized relational schemas and RESTful APIs, developing data-mapping and synchronization pipelines across heterogeneous hospital systems, and integrating Apache Superset to deliver interactive KPI dashboards and real-time operational analytics.
- Built and contributed to a healthcare **AI/RAG Platform** using Python, FastAPI, Celery, LangChain/LangGraph, Qdrant, MinIO, Redis, and RabbitMQ for document ingestion, vector indexing, semantic retrieval, structured extraction, and LLM-assisted responses.
- Developed custom automation scripts for backend workflows, reducing repetitive operations and improving system maintainability.

- Built and enhanced responsive Flutter interfaces for healthcare workflows across desktop and mobile form factors.
- Contributed to React/JSX/Vite frontend workflows, REST API integration, data synchronization, Linux/containerized deployment, CI/CD, observability, production debugging, and performance validation.
- Collaborated on system scalability, API integration, deployment readiness, and production reliability across multiple healthcare applications.

ACADEMIC PROJECTS

SMART ROAD MONITORING & REAL-TIME OBSTACLE DETECTION SYSTEM (*LiDAR + IoT*)

- Built a multi-sensor obstacle detection system using LiDAR & ultrasonic sensors on Raspberry Pi
- Implemented sensor fusion, noise filtering, and real-time hazard classification
- Designed scalable architecture for intelligent transportation and autonomous navigation
- Evaluated system performance across varying lighting and terrain conditions

INTERACTIVE TRAVEL WEB PLATFORM (*HTML, CSS, JavaScript*)

- Developed a responsive travel web application featuring modules like weather forecasting, solo traveller matching, destination discovery, blogs, and hidden place recommendations.
- Integrated external APIs (e.g., OpenWeatherMap) and dynamic UI components to deliver personalized, real-time travel experiences.
- Implemented an AI-powered chatbot using Gemini to guide users, enhance platform interactivity, and assist in trip planning.

VEHICLE DAMAGE SEVERITY CLASSIFICATION USING DEEP LEARNING

- Built an explainable AI system to classify car damage severity from images
- Used YOLOv8-n for vehicle localization and ResNet50 for classification
- Integrated Grad-CAM for model interpretability
- Achieved ~73% test accuracy with balanced macro F1-score
- Developed Python GUI for end-user predictions

ACADEMIC QUALIFICATION

- Bachelor of Engineering, Global Academy of Technology, Bengaluru, Karnataka, India Computer Science & Engineering. 2022 to 2026.
